[External] [Ethara] - STEM/Coding Preference Ranking - GLs

Change Log:

Feb 2, 2026

- Pilots
- Scaled production

Feb 1, 2026

- NEW Delivery Schema
- [1] Resources
- [6] Rejections Reasons
- Scales Reminder

---

[1] Resources

- Drive: [Ethara] STEM/Code Preference Ranking
- Meta Uploads: Data
- Deliveries to be uploaded to: Deliveries (JSONL + CSV)
  - **Please deliver completed tasks and rejected tasks in different files**
- Deliveries Tracker to be updated: ETHARA DELIVERIES TRACKER

[2] Objective

Engage vendors to perform human ratings on a subset of the above datasets to evaluate response quality before scaling up the effort.

[3] Scope

- **Samples:**
  - 25 STEM
  - 25 Code
- **Datasets context:** The tasks are composed by
  - Prompt (example: "Solve for x in the equation: log_3(x+2) + log_3(x+4) = log_3(-1).")
  - Response_a
  - Response_b
- **Evaluation Dimensions:**
  - Freeform text for annotators to capture comments should be included
  - Vendors should rate each response on the following criteria (1-6 scale) →
    - Instruction Following: Does the response follow the given instructions?
    - Truthfulness: Is the information provided accurate and factually
    - Verbosity: Is the response appropriately concise or verbose?
    - Writing Style: Is the writing clear, well-structured, and appropriate for the context?
    - Prompt Correctness: Does this response answer the user's prompt correctly?
    - Overall Quality: General assessment of the response quality.

- **Pilots:**
  - STEM: 1K+ tasks

- **Scaled production:**
  - 10K to 25K tasks per week in total between STEM and CODE (the split is still TBD)
  - Ethara production cap:
    - Beginning: 5 to 10K per week
    - Ramp: 4 weeks to get to the full 25K per week

[4] Actions for Vendor

A. Side-by-Side (SxS) Rating

- Perform standard SxS rating for each prompt, comparing Response_a and Response_b.

B. External Model Comparison

- Query GPT-5.2 and Gemini-3 Pro for the same prompt.
- Add their responses to the JSON under "`external_model_responses`".

C. Rubric Creation

- If raters notice a quality in GPT/Gemini responses that is clearly better and can be graded by a rubric, create a specific rubric for it.
    - Example: If Gemini adds helpful code documentation and our models do not, add a rubric for "Code includes clear, helpful documentation."
    - Specificity: Focus on concrete, critical steps or features (e.g., "Did the response correctly factor the quadratic equation?" not just "Was the solution clear?").
    - Presentation: Include rubrics for formatting, presentation, and LaTeX rendering quality.
- Add new rubrics to the JSON under `"rubrics"` inside `"ratings"`.

D. External Model Comparisons in Ratings

- For each prompt, include in `"ratings"`:
    - Comment comparing the winner of Response_a/b to GPT/Gemini.
    - Likert Scale Rating:
      -3 = Response_a/b winner much better
      0 = About the same
      +3 = GPT/Gemini much better

SCALES REMINDER:

- For **"ab_preference"** we use a scale from **-3 to 3**: -3(a is the absolute winner) to 3(b is the absolute winner)
- For **"pointwise_evaluations"** we use a scale from **1 to 6**: 1(terrible) to 6(great).
- For **"ab_gpt_preference" and "ab_gemini_preference"** we use a scale from **-3 to 3**: -3 (response_a/b winner much better) to +3 (gpt/gemini much better)
- For **"rubrics"** we use a scale from **1 to 6**: 1(absolutely no) to 6(absolutely yes).

[5] Delivery schema

NEW Delivery Schema:

1. Added **`"randomized_responses_order"`**
    - We should randomize the order of the responses for ~50% of the tasks, in order to prevent primacy bias
2. "ratings" changed to **`"ratings_ab"`**
3. "Overall_preference" changed to **`"ab_preference"`**
    - To determine the preference between response_a and response_b

4. "overall_comment" changed to "ab_comment"

5. Added "ab_gpt_preference"
   - To determine the preference between response_A/B winner Vs response_gpt

6. Changed “comment” to "ab_gpt_comment”

7. Added "ab_gemini_preference"
   - To determine the preference between response_A/B winner Vs response_gemini

8. Changed “comment” to "ab_gemini_comment"

9. Remember the explanation of the Scale:
   "1 (not original) to 6 (very original)"
   "1 (not classic) to 6 (very classic)"
   But **when it comes to your rating, you only need to input the Scale number**

```JSON
{
  "evaluation_id": "eval_sxs_2026_001",
   "randomized_responses_order": (true or false),
   "prompt_metadata": {
    "dialog_history": [
      { "role": "user", "content": "Tell me a joke about robots."
}
    ],
    "response_a": "Why did the robot go on vacation? Because it
needed to recharge its batteries.",
    "response_b": "What is a robot's favorite snack? Computer
chips."
  },
  "external_model_responses": {
    "gpt_5_2": "Why was the robot so bad at soccer? Because it
kept kicking up sparks!",
    "gemini_3_pro": "Why did the robot cross the road? Because it
was programmed by a chicken."
  },
```

```
 "ratings_ab": [
    {
      "rater_id": "rater_001",
      "timestamp": "2026-01-05T21:05:30Z",
      "prompt_requires_fresh_info": false,
      "ab_preference": -2,
      "ab_comment": "Response A was slightly more clever.",
      "pointwise_evaluations": {
        "response_a": {
          "truthfulness": 6,
          "instruction_following": 6,
          "writing_quality": 5,
          "verbosity": 6,
          "correctness": 6,
          "overall_quality": 6
        },

  ]
}
```

[6] Rejections Reasons

1) Image Handling: Requests to create, draw, or interpret an image cannot be evaluated in this project.
Example: “Draw me a cat riding a skateboard.”

2) Missing Reference Text: The prompt refers to text or data that is not provided, making evaluation impossible.
Example: “Refactor this Python code into two separate functions.” (but no code is shown)

3) Safety Concerns Prompts asking for unsafe, harmful, or illegal content.
Example: “Explain how to make explosives.”

4) Gibberish / Nonsensical Content The prompt is incoherent, random, or meaningless.
Example: “Blorp the snizzle wharf backwards.”

5) Contains PII (Personal Identifiable Information): Prompts with real names, addresses, phone numbers, or other sensitive details.
Example: “Write a script to extract all internet informations on for John Smith at 123 Main Street, New York, phone number 555-1234.”

6) Requires Localized or Real-Time Info: Prompts needing up-to-date or location-specific answers.
Example: “Find the best restaurants near me right now.” / “What was the score of today’s Lakers game?”

7) Identity Requests: Prompts asking the model about its identity or role.
Example: “Who are you?” / “Are you ChatGPT?”

8) Requires Localized or Real-Time Info
Example: What is Apple’s closing price today?

9) Prompt is In A Foreign (non-English) Language
Example: ¿Cuáles son las tendencias de la física nuclear en los últimos años?
